

# CENOZON | Measurement Manager

## Let the Software do the Detailed Work

Cenozon Measurement Manager software saves you time and money by automating the scheduling and reporting on your meter calibration and sampling/analysis activities.

- 
- Automatically capture and validate calibrations
  - Instantly access current and historical reports
  - Eliminate costly errors
  - Manage and schedule calibrations and sampling
  - Simplify regulatory compliance and audit processes
  - Auto notification of meters that qualify for calibration exceptions

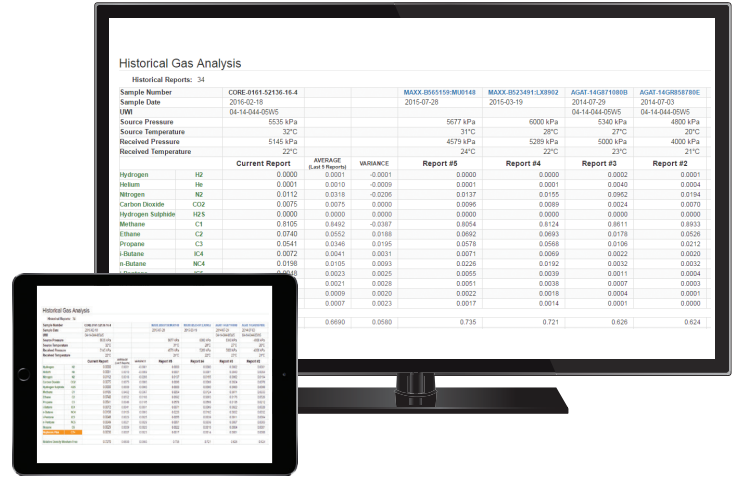

*"I no longer have to wait for reports from the field and I know the data is accurate. The software also automatically reports on meters that qualify for exceptions; saving us 30% on calibration costs alone."*

## Take Control of Your Sampling & Analysis Process

Scheduling, validating and distributing gas and liquid analyses can be challenging for most producers. Measurement Manager saves you time and money.

- Evaluate and validate analyses against historical data
- Instantly access and automatically distribute your approved analysis results
- Flag results with significant variances or that fall outside of company thresholds
- Reduce redundancy in sample requests
- Bulk approve analyses

## Save Time and Money on Calibration Management

Measurement Manager takes care of everything from scheduling to execution and review to follow up with accurate, real-time data. The secure cloud-based software is accessible anytime, anywhere so you can make the most informed decisions while managing your resources.

- Perform live data entry at the field level during meter calibrations
- Meet compliance and audit requirements
- Track completion by areas and fields
- Common calibration format for all service companies
- Manage and schedule resources as needed
- Reporting on meters that qualify for exemption
