

CENOZON | PAS Schematics

Simplify Your Production Accounting Process

Cenozon PAS Schematics software enables you to create flow schematics directly from data stored in your PAS production accounting system. Now you can understand your PA system setup, volumes, and balances in ways not possible before.

- Save time and costs with automatic, real-time schematics
- No drafting or set up required
- Streamline audits and compliance requirements
- Eliminate the need for schematic maintenance
- Make complex properties easier to understand
- Improve communications between departments
- Simplify training

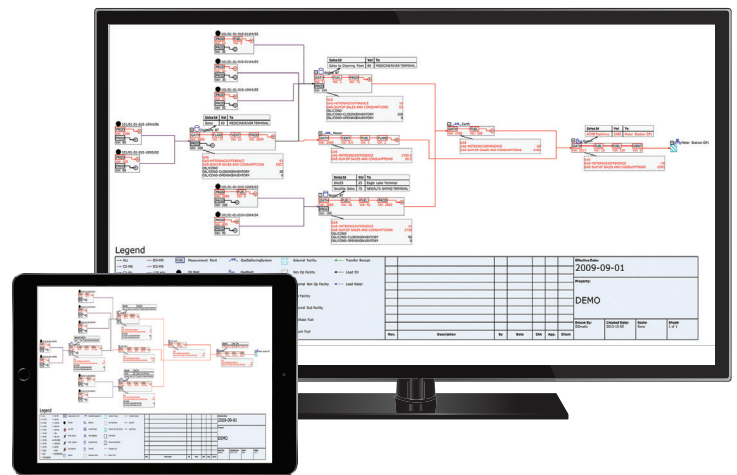

"Your software gives us an instant view of the setup, flow and volumes for any of our properties. It's an indispensable tool for troubleshooting issues, audits and training new PA's."

**CURRENT CENOZON CLIENT,
SUPERVISOR, PRODUCTION ACCOUNTING**

Save Time and Money

PAS Schematics automatically draws schematics with volumes and balances from your PAS system in real time. Use this for:

- Meaningful discussions between Field Operations and Production Accounting
- Simplifying training of new PA's
- Troubleshooting PAS set up
- Audit and compliance requirements
- Visually validating property set up
- Making complex properties easy to understand

Schematics can be expensive to create and difficult to keep current using traditional approaches. Cenozon PAS Schematics streamlines operational processes while reducing costly errors and amendments.

Customize the Data You Need

Harness the power of all your data with a few clicks of a mouse. You can easily configure the level of detail for your schematic:

- Select facilities to display from: wells, batteries, gathering systems, plants
- Select products to show from: gas, oil, water, NGL and sulphur
- Display measurement point volumes, names, flow
- Display disposition volumes, balancing data, fuel sales, and more
